

ActiveEye SaaS Application Security

ADOPT CLOUD APPLICATIONS WITHOUT COMPROMISING SECURITY

Modern organizations are leveraging SaaS applications to power their employee productivity, finance, HR, CRM functions, and more. The SaaS approach provides rapid adoption of new capabilities at a lower cost than on-premise deployment. Unfortunately, with these benefits comes new risks related to applications being outside a traditional enterprise perimeter, such as unknowingly exposing data outside the organization, allowing access via compromised accounts, and general lack of visibility to identify any type of insider threat from privileged accounts. While the platforms are generally secure, maintaining data security and proper configuration is 100 percent up to the organizations using them.

ActiveEye SaaS Application Security combines configuration best practices with advanced analytics to gain visibility and control around key SaaS applications driving the business, including Office365, Google G Suite, Okta, Box, and others. ActiveEye for SaaS Application Security connects quickly to your applications via API and integrates with ActiveEye Managed Security, your existing SIEM or other MSSP solution.

ActiveEye Analytics

Insider Threat

- ▶ Excessive File Access
- ▶ World Readable Files/Folders

External Threat

- ▶ Logon From Unusual Country
- ▶ Brute-force Attack

Compliance

- ▶ New User Creation
- ▶ Group Administration

Prevent a Cloud Breach

Gain visibility into how your SaaS application data is being exposed, who is accessing the data and from where. Get immediate visibility to any anomalous access.

Detect Insider Threats

Harness advanced analytics to profile user actions and detect behavior not part of normal business activity. Quickly identify any misuse of resources.

Demonstrate Compliance

Easily complete regular review of SaaS Application configuration activity and user access. Extend compliance reporting to the cloud.

Key Features for ActiveEye SaaS Application Security

Manage Security for All SaaS Apps in One Place

A single dashboard leverages activity and policy that is collected, normalized, and enriched to provide a similar view across all key SaaS applications

Assess Configuration Against Best Practices

Evaluate configuration policies for data security such as open access to file shares or connections from outside a corporate VPN

Review Administrative Actions that Could Create Risk

Simply review security relevant events such as user adds to administrative access groups and external file sharing with technical or business level owners

Detect Threats in Real Time

Detect external attacks and insider threats such as account takeover and excessive file downloads with custom policy rules, advanced analytics, and machine learning

Integrate with Existing Security Ecosystem

Raise awareness of issues and initiate resolution through existing workflows with email alerts, helpdesk integrations and syslog streams

Why Choose Delta Risk for SaaS Application Security?

▶ We are cloud security experts

Cloud infrastructure is here to stay, and our team is always learning so we can share our experience with our clients

▶ We believe in keeping it simple

Zero in on insights in as little as 10 minutes so you have more time to spend on your business

▶ Delta Risk is your complete security partner

From cloud security architecture assessment to 24x7 managed detection and response to incident response, we've got you covered

About Delta Risk

Delta Risk, a Chertoff Group company, provides customized and flexible cyber security and risk management services to government and private sector clients worldwide. Founded in 2007, we are a U.S.-based firm offering a wide range of advisory services as well as managed security services. Our roots are based in military expertise, and that background continues to drive our mission focus. We are passionate about keeping our clients safe and secure.
